

Screen 1

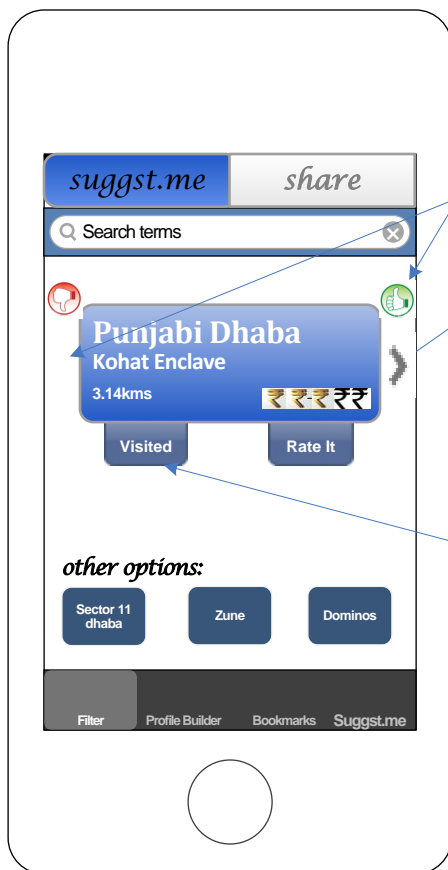

Screen 2.1

Screen 2.1 comes first and non-optional, since this information goes into reco engine to generate result for user. Screen 2.2 questions are specific information about user and if I am not wrong, the current version of reco engine does not support this as input. So we will have to explicitly apply these as filter on top of result generated for corresponding user.

Screen 2.2

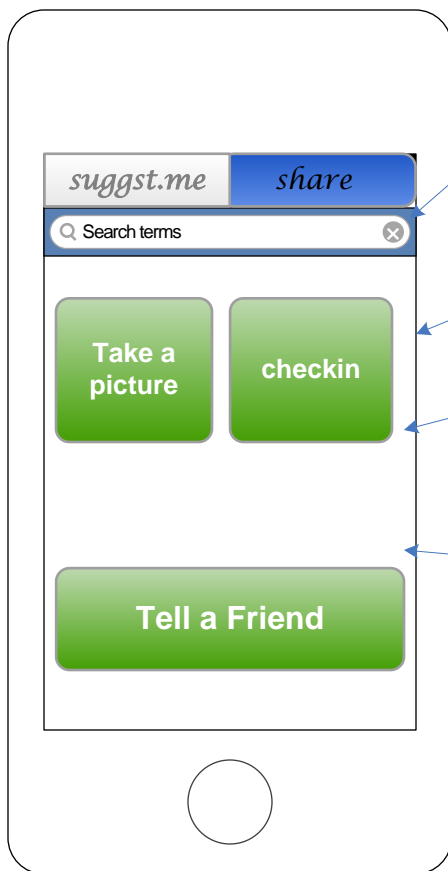

Screen 4

Thumbs up =
stored in db as
user like

Thumb down:
- for 3 consecutive thumb down screen 2.2
is shown
- all the common facets of above 3
restaurants are marked for user as dislikes

Restaurant details are shows:
1. Address
2. Phone Number
3. Map association (location on map)
4. Cuisine
5. Opening hours
6. Happy hours (if applicable)

If a restaurant is marked as been there and
there are no negative reviews (or no
reviews), then this restaurant is suggested
to user after some time (time period TBD)

Screen 5

- search friends
- search restaurant

Screen 6
